

FOCUS ON VISION CORRECTION FOR GOLFERS

DISCOVERED! GOLFING EYEGLASSES FOR PEOPLE WHO WEAR BIFOCALS

DAVE BELL, GOLF PRO AT TECUMSEH GOLF IN SOUTHWESTERN ONTARIO, has been tearing up the golf courses this summer and credits his recent victory achievements to his new golfing eyeglasses. Dave Bell's strength has always been his long game and he has rediscovered his short game as a result of being able to read the lies on the green better and his sharper vision through his new golfing eyeglasses.

Stop woofing golf balls because of your bifocals!

We have found that there is a major problem facing golfers over the age of 47, and they don't even realize that their major inconsistency in their game is due to their eyeglasses.

Imagine putting on a pair of eyeglasses where the distance vision is so crystal clear that you cannot even tell there is a bifocal in the lens. The peripheral vision in these incredible eyeglasses designed for golfing is absolutely amazing! Your eyes can scan across these virtually distortion-free lenses with none of the swimming sensation you would normally experience with a traditional invisible bifocal. Experience looking down to the ground and actually seeing your golf ball with no image jump or movement. You can also read your scorecard with these eyeglasses at the same time. Unbelievable: all of these features built into one pair of eyeglasses! And they look great, too.

It only gets better from here. These golfing eyeglasses barely weigh approximately 1/3 of an ounce (about the weight of 3 to 4 teabags.) The frames are pure titanium and are made in Austria for precision quality. You can get next generation transitions in these eyeglasses so that they double as your prescription sunglasses.

Paul Boyko Jr., President of Visions of Canada, has created a process that he can consistently make eyeglasses for golfing. His dedication to perfection in the

optical industry has led him to creating a process that is so precision perfect, he can now manufacture eyeglasses so golfers can better enjoy their golf game.

He claims his success can be attributed to testing his eyeglasses on golfers to assess their needs. He had been working on this process for over five years. Using the input of many experienced golfers, his procedure was perfected. Boyko

introduced his eyeglasses at the Novi Golf Show in February 2005. Now, there is no looking back. He has already created over 80 pairs of his incredible eyeglasses for golfers, and the feedback from his clients has been consistently positive. These people claim they now enjoy their golf game better due to the fact they can see clearer.

To maintain the quality when manufacturing these eyeglasses, they are all made in Boyko's store in Windsor, Ontario. He has over \$100,000 invested in laboratory equipment to maintain the accuracy of production. If you would like to learn more about his golfing eyeglasses and the procedure that he uses to create them, he invites you to call him at his

Visions of Canada store to arrange a visit, try on samples of the golfing eyeglasses, learn about the procedures he uses, and tour the manufacturing laboratory.

Craftsmanship in the optical industry still exists in this family-owned business in Downtown Windsor. Visit their website www.visionforgolfing.com. You can also reach Dave Bell at Tecumseh Golf, 1654 Manning Rd., Tecumseh. (519) 735-8933.
